BIOLOGIC HEALING ACCELERATION

PRP (Platelet-Rich Plasma) and PRF (Platelet-Rich Fibrin) Therapy

A biological dressing for rapid soft tissue and bone healing.

TEETH EXTRACTIONS

- Faster soft tissue healing
- Less swelling and discomfort
- Lower risk of post-op infection

WISDOM TEETH

- Reduces swelling and pain
- Supports clot stability and closure
- Decreases dry socket risk

DENTAL IMPLANTS

- Improves early bone integration
- Speeds recovery timeline
- Better long-term implant stability

BONE GRAFTING, SINUS LIFTS, AND BIOPSY PROCEDURES

- Accelerates bone and tissue healing
- Enhances graft success
- Supports surgical site recovery

PRP/PRF is created from a small sample of your own blood and contains concentrated healing cells. These cells gradually release natural growth factors that support tissue repair, improve blood supply, and enhance bone and gum healing after surgery.
